Using the Spot Healing Brush The Spot Healing Brush is found on the toolbox panel's lower-right side, and it features four modes: Healing, Refine, Shape, and Content-Aware. The Healing tool sets a foreground color based on the pixels in the surrounding pixels; Refine creates a new smoothed border around an object or area of an image; and the Shape tool changes a color to match an object. The Content-Aware tool looks at the surrounding pixels and changes the color of the foreground. All of these tools are covered in Chapter 13. If you want to take a shortcut when working with the brush, Photoshop's quick-selection tool is the best way to select a small area of an image. The tool uses the Magic Wand, so you can select a color quickly. You can see the Quick Selection option on the Toolbox panel's lower-right side.

Donald Trump and Hillary Clinton are two of the most disliked presidential candidates ever, according to a new CBS News poll. That's no surprise. But for a closer look, maybe it is. A close review of most polls from the past few weeks shows that the high name recognition for Clinton and Trump hasn't translated into the most liked candidates in recent polling, and that even among likeable candidates like former President Bill Clinton and talk show host Oprah Winfrey, the two still get their least positive ratings from voters. Meanwhile, the "least liked" categories from the same polls show that the Republican candidates for 2016 have been consistently the most hated. And when you factor in the issues and parties, it really does seem like Donald Trump gets to keep the title of most disliked president-to-be. The first and, arguably, most important poll question of the election season is from Monmouth University: Who would you support for president? The poll did not ask voters for a straight "like" or "dislike" response. Instead, they were asked to "approve" or "disapprove" of the candidates for president. Democratic candidate Hillary Clinton and Republican candidate Donald Trump are the most disliked candidates in a recent poll. CBS News So for both "approve" and "disapprove," there's room for nuance. On this measure of preferences, Trump wins the unpopularity title, with 42% disapproval and 53% disapproval. Clinton is at 50% disapproval and 43% approval. Two thirds of respondents said they had "no preference" between the two. There were more like-dislike voters overall in the survey (with the option to "neither like nor dislike") than there were percentage-level approval voters for either candidate, but still, Trump beat Clinton by 14 points. As that chart shows, the only contenders who have higher disapproval ratings than Trump are Bernie Sanders and Ted Cruz. As the chart also shows, Clinton actually is the one candidate with a higher percentage of like-dislike voters than percentage-level approval voters. But Clinton is very divisive, and the like and dislike ratings reflect that. A critical issue for Clinton and Trump is war. The Monmouth poll shows that 33% of voters approve of how Barack Obama is handling the war in Iraq. Trump and Clinton get a combined 86% disapproval rating for that. Trump is particularly unpopular with young voters, the Monmouth poll shows. The same cannot be said of

on-line stores provides ease of shopping and convenience. Most of the leading online shopping sites have build in online payment system where you could shop and checkout

with the ease of one click or tap. You just need to have a merchant account for your electronic money transfer. Electronic payments lets you avoid inter bank transfer costs, check fees, and counter checks. Although electronic payments don't cover all payments, it does cover most of them. For example, they cover the transfers between bank and bank, and they also cover the transfers in between banks.

2. Pay with your mobile phone. Banks are known for providing reliable and consistent services. This is why it is a surprise to most users when they find a bank that does not support ATM transfer. An old bank friend of mine tried to withdraw his money from the bank ATM machine. He couldn't withdraw his funds and told the ATM clerk the problem. The ATM bank clerk asked him to use his mobile phone to complete the transaction instead. Although he was willing to do so, he was confused how to link his mobile to the ATM. His bank, and therefore his phone, were different banks. Thus, he could not proceed to the next step. He came back the next day to use the ATM machine and found out that the problem is fully sorted. The bank support team explained to him that he needed to link his mobile phone to the bank that issued his phone. He was shocked and amazed that the bank worked so fast to resolve his problem. Compare that to the frustration of the bank customer who couldn't withdraw his money, and then waited for an hour before the ATM technician was able to come and resolve the issue. This is possible with some banks online services. Some banks online services allow customers to use their mobile phone to connect to a bank's ATM or net bank account and in some cases pay from it as well. In most cases, all you need to do is download a mobile payment application. It is available for free and the user can start making payments that way.

3. Avoid manual transaction process. Banks are full of processes. Most of these processes are fine. They are necessary for the protection of the bank against frauds. With an online payment service, you do not need to go through different applications and wait hours or days. However, your payment can be easily reversed if the transactions you complete turn out to be frauds.
