It doesn't take a great deal of imagination to see a future where humans are living off-planet, says Hal Fyock. He's a world-renowned space architect who has spent decades thinking about how we could be living in space, not just travelling there.
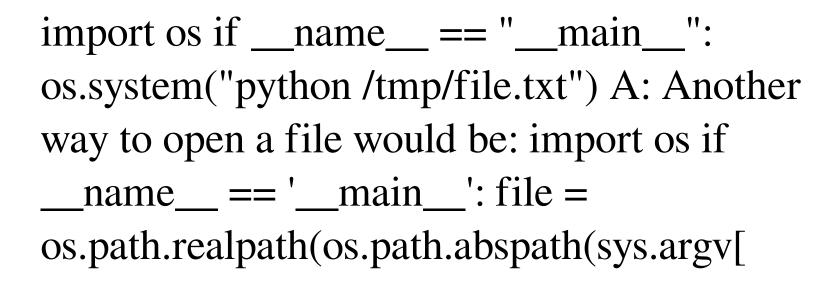

Now he has co-founded a new company with his wife Marsha, The Titan Space Company, and together they want to build a system to help us move off-world. In the recent book Better Living in Outer Space, Fyock says that even though we are likely to go to Mars at some point, the real way to live off-planet is to live in space like we live on earth. He says if you look around at our neighbourhoods, they seem to be near big cities like Tokyo, Sydney or New York. People are living close together and they are busy all the time. "If you could live in a big space station, like if

you were living in one of those giant hotels, that is where your suburb would be," Fyock says. "You could live inside that space station as a totally independent and autonomous living unit, and so you would spend all your time working, and playing, and doing whatever you wanted to do 77a5ca646e

About me: I am just a humble user who would like to share this software to the world.Q: How to make a Python script to work in the command line and as a bash script? How can I make a script that works in the command line? (I can work around the problem, but I want to know why my script doesn't work.) I have a script named abc.py that has the following: if __name__ == '__main__': f = open(sys.argv[1], 'w')

f.write('Hello ') f.close() I'm trying to run it from the command line with the following: $ python abc.py /tmp/file.txt But it's not working: Traceback (most recent call last): File "abc.py", line 9, in f.write('Hello ') IOError: [Errno 22] Invalid argument Why? A: import sys if __name__ == '__main__': with open(sys.argv[1]) as f: f.write('Hello ') or import sys if __name__ == '__main__': with open(sys.argv[1]) as f: f.write('Hello ') to open the file. A: import os if __name__ == "__main__": path = sys.argv[1] with open(path, 'w') as f: f.write("Hello ") or

import os if __name__ == "__main__": os.system("python /tmp/file.txt") A: Another way to open a file would be: import os if __name__ == '__main__': file = os.path.realpath(os.path.abspath(sys.argv[
