Hand DGN The DGN files standard file format for AutoCAD Serial Key users is the 'Drawing Interchange Format', or 'DGN' (pronounced "dungen"). DGN files are a form of Hypertext Transfer Protocol (HTTP) application file format. A DGN file is usually used to describe the structure of a CAD drawing, and share the information between applications. In addition to the DGN format, AutoCAD provides a WebDAV protocol for sharing DGN information between applications. The DGN format is supported by almost all CAD systems that operate on the Windows platform, and is the de facto standard CAD file format. Support for other CAD applications AutoCAD has a number of add-on applications that facilitate workflow. These include: Web Application Toolkit (WAT) Webcast Online

Interactions between proteins are essential in many biological processes and are typically modulated through binding to cognate protein surfaces. The resulting protein-protein interfaces offer a target for development of pharmaceuticals that modulate function. This review summarizes some of the main approaches that have been used to interfere with protein-protein interactions. Some of the approaches described (small molecules, peptides, antibodies and interfering RNA) all have advantages and disadvantages, although none is ideal in all respects. Thus, selection of the appropriate strategy requires consideration of many factors. This review describes some of the applications and advantages of these various approaches, although it also addresses the general issue of what strategies should be used in the development of pharmaceuticals.[Treatment of unstable fractures of the pelvis using a polypropylene mesh under tension]. The authors present the first series of use of a polypropylene mesh under tension in open surgery of unstable fractures of the pelvic ring. The operative technique is described. Our early postoperative results are positive, with few complications. Basing on the anatomical study and the biomechanical study of the mobility of the pelvic ring, the authors support the use of a mesh under tension. They think that its addition in open surgery of fractures of the pelvic ring is useful.
