I met Jon on episode 7 of The Geek Next Door. I had just returned to the internet after going on a little detox and found the show. Jon was one of the few people that I could connect with. His comedy was amazing and his camera work was flawless. I had known he was sick for a while but in the last few weeks it was obvious that his energy was fading. I have set up a website for the first time and I used the following to automatically download images. RewriteRule ^media/gallery/(.*)\.jpg\$ media/gallery/\$1 [R,L] The images are downloading correctly but when I try and view them in my browser, it says: The image cannot be displayed because it contains errors. When I look at the page in Firefox, I see a warning box below each image that says: The image "file:///C:/Users/Mike/Desktop/.../media/gallery/file.jpg" cannot be displayed because it contains errors. I have tried to see the error box in Internet Explorer but I cannot. I would like to fix this but I am not sure how. Any help would be appreciated. You'll get several benefits from this shape including easier editing, reducing distortion, and providing a better overall shape. (video: 1:15 min.) Improve the accuracy and legibility of your designs with standard polar regions. (video: 1:55 min.) Drafting Rules: In addition to Polar Regions, you can create your own drawing rules and use them to manipulate or style your drawing. Use drawing rules to group line objects and offset objects, and even to create custom shapes. (video: 1:15 min.) Add and edit layer properties to your drawing using any object as a template. Apply the layer properties to new shapes, edit existing shapes, or even add and edit layer properties to objects that aren't shapes. (video: 1:15 min.)
