PaintShop Pro PaintShop Pro is the oldest and most established editing program for digital photography. It's available for Windows and OS X. PaintShop Pro is easy to use, yet it's got a great number of features for those who really want to get their hands on Adobe's professional-grade image-editing software. If you're a beginner, then you may want to explore the PaintShop Pro Express option. For $29.99, you get the most basic version of the program, but it does include some features that you might need as a beginner. Windows: Visit www.photoshop.com and download the PaintShop Pro Express version for $29.99. OS X: You can download PaintShop Pro in the Mac App Store for $29.99. Web: Visit the PaintShop Pro site at www.paintshoppro.com.

Q: Keep the original non-conformists and the conformists together If we select the non-conformists from the conformists and the conformists from the non-conformists, then we are left with a mixture of conformists and non-conformists. Conformists will conform to the rule-of-thumb, as they believe that is best. Non-conformists will break the rule-of-thumb for their own means, as they know that is the best. So if we leave them together, then the best solution would be where they function together. But can we design the environment so that this is the situation? A: The solution is Conformist + Nonconformist = Genius. This is true because if you want to create a genius you do not mix the two in one flask. A: The question comes across as similar to a birth-death process in which there are n conformists and m nonconformists. The population evolves through generations according to the following dynamics: Select a population at random and copy it to the next generation; select the m worst conformists with probability $\frac{c}{n}$, and the m best nonconformists with probability $\frac{c}{n}$; replicate the total n in the second generation; and so on. If the selection probability c is 1, then we have the well-known random mutation model for the birth-death process. In this case the population will grow exponentially, and so if $n\geq c$ the total population will grow exponentially. On the other hand, if n They are the negative images that lay at the heart of the Aztecs' sharpest success and deepest failures during the late 1970s and 1980s. The graphics were swirled into every arena, the chants chanted at every whistle. Q: Adding a "lid" to my cheap Ikea Klasse 2629 coffee table I bought this cheap Ikea coffee table, 34x36x20cm, and I want to add an extra lid to it, to make it a bit more decorative. I intend to use it as a coffee table, in the living room, and as I'm almost blind in both eyes, I'm scared I'll be able to lift it to take a drink, in case it shifts and falls. I am asking about 3 different things here: Is it likely to fall and hit me in the head, if I push it slightly? Can I easily lift the top (both together and on one side) without great effort? Is it possible to attach 2 thick plastic plates (with holes) to the top and create a dual-layer? If so, can this be done without needing to purchase and drill additional holes into it? Also, just to be safe (or at least, to minimize the chance), is it possible to add a 5mm thick layer of a very soft plastic (or something like that), between the aluminum and the wooden top? I've seen this done on some other Ikea coffee tables. A: Is it likely to fall and hit me in the head, if I push it slightly? I doubt it. Although, it's not impossible and something to be wary about. Can I easily lift the top (both together and on one side) without great effort? Yes, again, it's not impossible. Is it possible to attach 2 thick plastic plates (with holes) to the top and create a dual-layer? If so, can this be done without needing to purchase and drill additional holes into it? You'd need one side plate to fit over the underside of the top and then a second plate on top of the underside of the first. Also, just to be safe (or at least, to minimize the chance), is it possible to add a 5mm thick layer of a very soft plastic (or something like that), between the aluminum and the wooden top? I've seen this done on some other Ikea coffee tables. It's not impossible, but in the end you'd probably get better results by doing this in a paint shop. The shop could recommend an extra protective coat and give you some tips.
