AutoCAD offers features that include drawing objects, including lines, arcs, circles, ellipses, lines and polygons, splines, tables, and text. AutoCAD supports 2D vector graphics, 2D raster graphics, and 3D graphics. The AutoCAD API for .NET is not an API intended for automation. Instead, it's for direct access to the objects within AutoCAD and is used to create plugins, and other custom applications. For more information on the .NET API, see the Autodesk Developer Network article: [AutoCAD Drawing.NET API](# Visual LISP Visual LISP is a Visual Basic based language for automating AutoCAD. Q: Is there a language that allows you to use X rather than write X? I'm looking for a programming language that will allow me to simply type a program and have it run. I don't need the power of a scripting language or even a compiled language like C or C++. I just want to be able to take my finished work, and run it. To clarify my use case, let's say I have the two programs: #include "foo.h" int main() { printf("Hello World"); return 0; } and #include "foo.h" int foo(int y) { return y; } And I have a third program: #include "foo.h" int bar() { foo(5); } and the third program I want to run is foo(5). I want to write the second program, hit run and have it run. I don't want to write the first program, run the second program and write the third program. I want the third program to run automatically, without my intervention. I know this is possible with interpreters like python and Java, but I'm looking for something that runs right out of the box and is ready to go. A: The answer to your question is yes. It is called interpreters. You can write a program that is an interpreter, or even a compiler that will do what you want (run an arbitrary program). Interpreters are easy to write, have been around for a long time, and have been highly optimized for years. They are part of every programming language, so they are highly optimized. For example, if you use a python interpreter, you can type python -c "print('Hello World!)" and it will run, and you can interact with it (print to console, get input, etc.). Any other scripting language (Perl, Ruby, etc.) will work similarly. During the American Civil War, many women volunteered and participated in the war in some way.
