KeyMACRO is a high performance macro recorder and editor for Windows. KeyMACRO stores its data in the registry. Thus, it cannot be accidentally lost if the system crashes or the hard drive is reformatted. There are two modes of operation: the recording mode and the edit mode. How to install: Make sure that you have installed Cygwin 1.5.1 or later. Copy keymacro.dll to the Cygwin bin directory. Copy keymacro.reg to the registry key (HKEY_CURRENT_USER\Software\KeyMACRO) with a friendly name, such as "Macro Recorder." Copy the registry file into a known directory.

KeyMACRO and the Cygwin environment can be installed on the same machine. After installing the application, load the utility in the editor by double-clicking the keymacro.dll file. How to use: In the recording mode, open the registry file, named keymacro.reg, with the text editor. Then, record the macro keys as you click on them using the mouse. The actual recording is done with a macro recorder application. As soon as the recording is complete, the registry is closed. In the edit mode, open the registry file, named keymacro.reg, in the text editor. The application does not depend on any kind of application installed on the system. The following is the official description of KeyMACRO from the developer. Windows Explorer/Nautilus: KeyMACRO allows you to capture a set of keyboard commands and execute them. It has the same keyboard shortcuts as Windows Explorer/Nautilus. Thus, you can capture an explorer session and create a keyboard macro that will open every folder in explorer in a specific folder. Cygwin's Wine: Wine programs can be captured. Environment: KeyMACRO can capture the Linux environment if the captured commands are executed through Cygwin. Windows-Linux:

Windows and Linux can be captured from the same machine and shared between both environments. KeyMACRO does not depend on any application installed in either the Windows or Linux environment, but it depends on Cygwin. xinit is a X11 initialization program.
