

# Windows Defender Real Time Protection Greyed Out

Instructions How to install and configure Windows Defender for the next three steps: Note: You can substitute your actual Windows Server for the one I installed. I was following along with the "Getting Started" video. NOTE: Using Windows Defender will change the quality of your connection to the Internet. If you have multiple Internet connections, such as cable, dialup, and home broadband, be sure to use the Internet connection that you use the most. Follow the onscreen instructions to finish the installation. You can choose to download updates from Microsoft Update once the installation is complete. Next, select to enable or disable real-time protection for the real-time protection checking during: Restart the computer and click Next. After the computer restarts, log on to. While the computer is restarting, you may see a message in the Description column of the task dialog box, which reads "Windows Security app is restarting now." The reason the message appears is because Windows Security performs a one-time scan of the computer. In the future, if you need to restart your computer, Windows Security will scan the computer automatically. If you see the message, click the Yes button to restart Windows Security. If you do not see the message, choose the Do not display this message again option. Click Next to restart the computer and follow the onscreen instructions to finish the installation. Next, you may need to choose a password for your account. We recommend that you choose a password that is easy for you to remember, but difficult to guess. Be sure not to use any personal information in your password, like your birth date, your address, or any other personal information that can be easily found on the Internet. Windows Defender's options show up on the Security Settings app, but can also be accessed from the Start menu under Personalization>Settings. You can also use Windows Defender to protect other devices running Windows, including your Xbox, mobile phone, and tablet. To do so, go to Device protection, and then click Add a new device. If you need to protect this device manually, select Windows Defender and click Protect a device. Install the Windows Defender app to your mobile phone and tablet devices from the Microsoft store. How to Upgrade to Windows 10 You can upgrade
