In 2018, Adobe redesigned the desktop version of Photoshop CC in a big way. The design is cleaner and smoother to use. Layer styles look more natural, and the new Radial Blur effect is easy to use. The Camera Raw tool is easier to use for Android users. The desktop version has had some pretty major updates. The most significant change is that Adobe switched to using the industry standard Edit > Undo command rather than the user-friendly Previous lever. It adds up pretty quickly, though. New Features include improved Clarity, Warp Tools, and Colorize. The Add New Document option is new, too, and includes a new New Document panel that has a lot of information and documentation about the new feature. The last update to Photoshop removed the layer interface in favor of a more streamlined version where everything is in the layer panel, which itself sits alongside the top program bar and the Eyedropper tool. The new interface looks better but was criticized as confusing and having too many options that weren't immediately apparent. The biggest complaint about the interface had to do with the keyboard shortcuts. Instead of giving you all the frequently used keyboard shortcuts—like Alt+Tab to switch between apps, space to select a layer, and Ctrl+W to close up a window—Photoshop CC now drops you into a list of all the keyboard shortcuts. That's a useful feature, but it's a bit too much.

Masking is a special effect that can be used to hide and reveal certain areas. You can add a mask layer and adjust the transparency. You can place a pattern layer inside a mask and change the pattern. You can also create a path and fill the shape with an image, gradient or pattern.
